

## VOS GROUP ENVIRONMENTAL POLICY

At VOS, we believe our corporate responsibilities include minimising resource use and protecting the environment, while delivering quality engineering services.

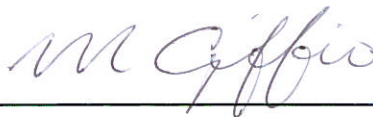

We define Ecologically Sustainable Development as the use of resources in a manner that does not compromise the ability of future generations to use those resources. We recognise that all of our activities and services can impact the environment and actively seek to minimise this impact, in both the engineering designs we provide to clients and our day-to-day operations.

Our environmental objectives are to:

- Promote sustainable resource use
- Create sustainable, cost effective designs
- Work with clients, suppliers and business partners to continually improve our environmental performance
- Implement a formal Environmental Management System to ISO14001 requirements
- Educate staff, clients and peers on emerging environmental opportunities
- Set an example of leadership in the field of sustainable engineering

VOS Group strives to meet these objectives by creating designs that minimise the demand for water, energy and materials, and providing innovative alternative supply through water reuse and on-site generation of power. Across all of our operations we are in the process of systematically reducing our paper, water and energy use, and minimising the pollution created by transport.

VOS Group has made a commitment to become leaders in the constantly evolving field of Ecologically Sustainable Development. The VOS Group Environmental Management System provides the framework for developing, implementing, monitoring and reviewing our environmental objectives to ensure continued improvement.
